SoCalREN

EMPOWERING TOMORROW'S ENERGY LEADERS

SoCalREN is building a diverse workforce today—and for the future—by providing educational training, tools, and opportunities in energy and water efficiency for students and young professionals. See what's available below.

Elementary School

3rd–4th grade

Kits for Kids

With help from friendly energy monsters, the Kits for Kids Program provides students with a fun introduction to energy efficiency. Teachers get lesson plans, while students learn through engaging online games and receive a no-cost kit of energy-efficient items that can help their families save energy and money. Participating classrooms can receive a $1,000 grant.*

Middle School

6th–8th grade

Future Green Leaders Summit

Bringing together students, teachers, and industry professionals each year, the Future Green Leaders Summit inspires and exposes students to STEM careers in energy and sustainability. Students can explore various career options and learn what skills and knowledge are required for future success.

High School

9th–12th grade

ACES Pathway

To help increase diversity in design and building fields, the Architecture, Construction, Engineering, Sustainability (ACES) Pathway Program exposes, engages, and challenges students to explore architecture, engineering, and construction careers. Through the program, students can earn transferable college credits and get paid internships.

Post-High School

Ages 18 and up

Green Path Careers

To help youth pursue lasting careers in sustainability, the Green Path Careers Program provides case management, on-the-job training enrollment assistance, employer connections, employment assistance, and referrals to additional programs. Participants can get technical training, education, and paid work experience in energy efficiency.
