1. Overview  
2. Total Energy Portfolio  
3. Water Pumping  
4. Building Summary  
Appendix A - Methodology
1. Overview

This report is intended to provide a framework for the Eastern Municipal Water District, referred to as “Agency” herein, to identify inefficient facilities and infrastructure and prioritize further investigation and energy efficiency retrofit work. This analysis uses only total floor area and energy billing data provided by the Agency to analyze energy use across Agency assets, and to help identify opportunities for energy efficiency improvements. Many factors affect the energy use in different assets, including age, type of heating, ventilation, air conditioning (HVAC), and lighting equipment, facility occupancy and hours, plug loads, and climate. Once individual opportunities with the greatest potential for energy savings are identified, a more detailed screening of those facilities can be performed to identify the specific sources of the inefficiencies.

This report was created by The Energy Coalition on behalf of the Southern California Regional Network (www.socalren.com). Any questions about this report can be directed to your assigned Project Manager, Julie Castro, at jcastro@energycoalition.org.
2. Total Energy Portfolio

Your Total Annual Energy Cost is $5,768,382

Table 1: Total Energy Portfolio (Annual)

<table>
<thead>
<tr>
<th>Agency Energy Use</th>

<td>$890,658</td>
<td>30,982,854</td>
<td>$890,658</td>
<td>4,697,400</td>
</tr>
</tbody>
</table>
3. Water Pumping

Your Annual Energy Cost for Water Pumping is $890,658 and 15.2% of the Total Cost.

Key: Displays the top 5 consuming pumping service accounts. Columns represent Cost, Area represents Consumption.

Assumption - 65% of all pumps need to be upgraded. Those pumps will reduce consumption by 7.5% kWh post retrofit.

Calculation - projected savings are 7.5% of 65% of the total PA consumption (for ALL pump accounts)

Appendix A - Methodology

1. Data Sources

- Building information, energy usage and cost data used in this analysis were derived from utility consumption billing data provided by agency staff.
- Utility consumption billing data used in this analysis were derived from SCE electric tariffs.
- For more information about the utility tariffs included in this analysis refer to:
  - SCE Electric Tariff: For more information about Southern California Edison tariffs; https://www.sce.com/wps/portal/home/regulatory/tariff-books/rates-pricing-choices
- All electricity results were based on usage during period January 1, 2013 – December 31, 2013.
- In some cases, multiple meters were associated with a single facility or asset type. For such facilities, to generate estimates of facility-wide energy use and energy intensity, energy usage and cost values were aggregated by summing energy usage and cost values for each day in the analysis period.
- GHG emissions data used in this analysis were calculated using the conversion: 517 lb CO2/MWh + 11.91 lbs CO2/therm [1,2].
- One service account did not have energy usage data for the range of the analysis period and were excluded: 1301 Case Rd, Perris, CA – Service Account #4541457

2. Total Energy Portfolio
● Total Energy Portfolio data represents an analysis of each agency facility type annual energy costs, annual energy consumption (kWh), GHG Emissions and total annual energy costs for agency facility types based on MBtus.

● The following agency assets are included in the Total Energy Portfolio:
  o Water Pumping
  o Street & Traffic Lights
  o Buildings
  o Outdoor & Parks Lights

3. Water Pumping

● Water pumping data represents an analysis of the top five highest energy consuming water and wastewater pumping SCE service accounts annual energy costs, annual energy consumption (kWh), GHG Emissions, and total annual energy costs based on MBtus.

● Water pump conversion data used in this analysis is derived on the assumption that 65% of all existing pumps need to be upgraded. Of the 65% of pumps requiring upgrades, it is assumed that the pumps will save 7.5% of their annual kWh consumption [3].
4. Building Summary

- Building summary data represents an analysis of the top ten highest energy consuming agency buildings annual energy costs, annual energy consumption (kWh), GHG Emissions, and total annual energy costs based on MBtus.
Endnotes

[3] Based on SoCalREN previous project estimates.
